Coal Emissions and Environmental Considerations

Coaltrans Training Course, Oxford
25th September 2015

nigel.yaxley@energyedge.net

Coal Emissions and Environmental Considerations

- ▶ Introduction
- ▶ Emissions from Burning Coal
- ▶ Effects of Emissions
- ▶ Abatement and Control Technologies
- ▶ Coal and Climate Change
- ▶ Existing Regulations and Future Impacts

ENERGY EDGE

Coaltrans Oxford 25th September 2015

2

Introduction

Dirty coal
Conventional pollutants
Greenhouse gases
Abatement choices
Regulation

ENERGY EDGE

Dirty Coal – Sheffield 1953

ENERGY EDGE

Coaltrans Oxford 25th September 2015

4

Beijing Smog - Current Times

ENERGY EDGE

Coaltrans Oxford 25th September 2015

5

Conventional Pollutants

Particulates

SO₂ – sulphur dioxide

NO_x – nitrogen oxides

Also minor and trace pollutants,
including trace elements (e.g. Mercury)

ENERGY EDGE

Coaltrans Oxford 25th September 2015

6

Greenhouses Gases

CO₂ – carbon dioxide

CH₄ – methane

N₂O – nitrous oxide

NB CH₄ released during mining

ENERGY EDGE

Coaltrans Oxford 25th September 2015

7

Abatement Options

Fuel switching

Coal cleaning

Reduced operating hours/closure

Retrofitting old plant

New state-of-the-art plant

ENERGY EDGE

Coaltrans Oxford 25th September 2015

8

Regulation

Voluntary action

- Action plans
- Non-binding targets

Command and control

- Emissions concentrations in flue gases
- Annual caps on emissions
- Old/new plant standards common
- 'BAT' concept – mandate Best Available Technology
 - ('MACT' in USA – Maximum Achievable Control Technology)

Market mechanisms

- Emissions trading

Coaltrans Oxford 25th September 2015

9

Scene-Setting Discussion

How do public attitudes to coal differ across continents?

Which are the most important environmental issues around coal?

How should the industry respond to the barrage of anti-coal propaganda?

ENERGY EDGE

Emissions from Burning Coal

Particulates
Sulphur dioxide
Nitrogen oxides
Mercury etc
Carbon dioxide

ENERGY EDGE

Effects of Emissions

Particulates
Sulphur dioxide
Nitrogen oxides
Mercury etc

ENERGY EDGE

Abatement and Control Technologies

Particulates
Sulphur dioxide
Nitrogen oxides
Efficiency and 'clean coal'

ENERGY EDGE

Coal and Climate Change

Coal emissions
UN processes
Technology solutions

ENERGY EDGE

Existing Regulations and Future Impacts

Types of regulation
World summary
EU regulation
The future of coal

ENERGY EDGE

EU Regulation

Large Combustion
Plants Directive
Industrial Emissions
Directive
2030 Energy Package
Emissions trading

ENERGY EDGE

The Future of Coal

Climate activism
Divestment campaigns
Pragmatism

ENERGY EDGE

Discussion

How should coal companies brief delegations for Paris 2015?
How do the challenges for coal differ across continents?
Can we put our faith in technology?

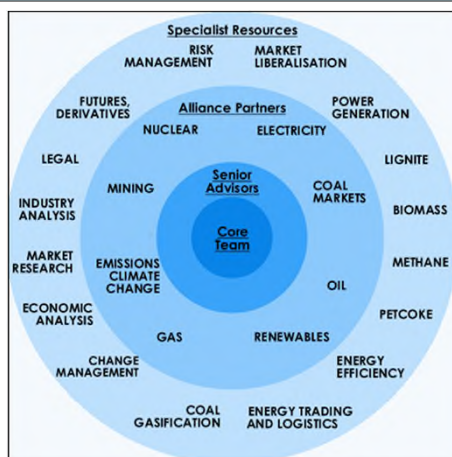

ENERGY EDGE

Discussion

The way forward for coal
Is coal doomed to be the new tobacco
or is there a better solution?

ENERGY EDGE

Energy Edge Tailored Solutions

- ▶ Core team
 - Senior strategic level experience in major businesses
- ▶ Expert network
 - Active and deep working knowledge of relevant sector
 - Use of specialists tailored to meet clients' requirements
